

# GEORUNNER® Landscape Turf Protection Mats

## 1 Reduces Rutting

## 2 Easy Handling

## 3 Integrated Connections

## 4 Bridges Sand

## 5 Supports Vegetation

## 6 Weather Resistant

### 1. Reduces Soil Compaction & Rutting.

GeoRunner mats protect turf from soil compaction, deep ruts and damage caused by concentrated light-to-medium vehicle or equipment loads. They can reduce mud tracking from construction site entrances.

### 2. Lightweight, Easy to Handle.

The mats are light-weight, easily transported between jobs and require minimal storage space.

### 3. Fully Integrated System Featuring End-to-End and Side-to-Side Connections.

Securing GeoRunner mats end-to-end with rivets with overlapping tabs creates a flush connection for wheel lanes. Side-to-side connections are available when connecting larger areas.

### 4. Bridges Sand.

GeoRunner mats bridge over sandy areas to allow easy access of light-weight vehicles, wheel chairs or foot traffic.

### 5. Supports Vegetation.

May be used for temporary or permanent light-weight applications. The open design stimulates dense vegetation growth as sunlight and water easily can permeate, maintaining healthy turf for long term use.

### 6. Weather Resistant.

Unlike plywood that accumulates mud and absorbs water, GeoRunner mats are made from weather-resistant polymer. They won't rot or get soft and are easily cleaned for multiple uses.
